Andries van der Ark is a full professor of Psychometrics at the Research Institute of Child Development and Education and serves as the chair of the Methods and Statistics section within the Department of Child Development and Education, both at the University of Amsterdam, The Netherlands. His primary research centers on the development of statistical models for test and questionnaire data, particularly (nonparametric) IRT models, latent class models, and marginal models. He has also developed methodologies for evaluating test-score reliability, assessing interrater reliability, constructing test norms, and handling missing data.

He currently serves as treasurer of the Psychometric Society and chairs the Society's Finance Committee and Conference Committee. He has held various roles within the Society, including serving on the local organizing committee for IMPS 2005; serving on the Program Committee from 2011 to 2013 and again in 2023; serving on the Board of Trustees from 2014 to 2017; chairing the Publication Committee from 2014 to 2017; serving as an editor of the proceedings from 2012 to 2017, serving on the Editorial Council from 2015 to 2017; and serving on the Finance Committee from 2015 to the present. Additionally, he has served as chair, director, secretary, and member of various other academic and professional organizations.
