ABOUT US
The mission of MediOrbis is to bring high quality healthcare to patients worldwide in a simple and accessible manner. With a core of physicians as its’ founding members, MediOrbis knows what patients need from their physicians and how to provide it via telehealth. With MySpecialistMD, a network of the world’s best primary care, specialty care, and subspecialty care physicians, and utilizing a world-class technology platform, MediOrbis is capable of delivering expert telemedicine services in almost any field of medicine, clinical care or diagnostics. MediOrbis is changing the way medical care is delivered across the globe and shattering the barriers of tradition medicine. **MEDIORBIS IS NEW MEDICINE!**

**QUALITY**
We connect patients with the highest quality primary or specialty physicians to meet their medical needs. **All physicians are highly trained, board certified and licensed in their region of practice.**

**ACCESS**
Physicians can be **accessed from all over the world** with the touch of a button.

**EFFICIENT**
MediOrbis’ clinical services are **COST and TIME efficient**, for both providers and patients.

Our Physician Network: **MySpecialistMD Network**
Only the highest qualified physicians are asked to join our expert medical group. Our physicians are carefully selected based on strict criteria, and undergo a rigorous credentialing process to insure that only the absolute best physicians work with you. We refuse to compromise on the quality of care that is delivered to our patients. We pay particularly close attention to the ability of the physician to connect to patients and form a meaningful and healthy therapeutic relationship, to insure that the standard of care is equal to that of traditional brick and mortar clinical care.
ALL PHYSICIANS ARE:

- Trained in accredited U.S. residencies and fellowships *
- Certified by the American Board of Internal Medicine in their medical specialty*
- Licensed in the state where they practice medicine
- Undergo extensive technology training
- Experience continuous quality monitoring to insure adherence to the highest level quality care
- Adhere to the American Telemedicine Association guidelines for practice of telemedicine

*(or the equivalent for international physicians)

HOW TELEMEDICINE WORKS

1. Illness, question medication refill request
2. Connect with an expert physician
3. Have your medical questions answered
   - Easily integrate into our existing network

COST SAVINGS:
In-person medical care is EXPENSIVE and often UNNECESSARY
- Average ER Visit: $2,600
- Average Cost of Urgent Care: $500
- Average Cost of Office Visit: $190

Low Cost + 24/7 convenient access!

Our telemedicine consultations are a COST EFFICIENT way to treat routine medical issues.

By driving utilization with our outreach and advertising programs, we improve your ROI

“After suffering with cold symptoms for three days, I decided to give your service a try. Scheduled an appointment on their website and received a call immediately - five minutes early! Doc was on the phone waiting for me. What a change from a normal office visit! Less than five minutes later, Consult was done, and I had a diagnosis of an upper respiratory infection, recommended over the counter meds and the promise of an antibiotic prescription at my local pharmacy within an hour. Couldn’t be any easier!”
PROGRAMS AND SERVICES

1. Primary Care and Acute Care: For any of your sudden medical needs

2. Chronic Disease Management Program: Offering tools and services to help manage long term illnesses such as Diabetes, Hypertension (high blood pressure), COPD, Heart Failure, and Asthma

3. Specialty Services: Speak to a licensed specialist to obtain a consultation or second opinion regarding your complex specialty medical questions

Top 10 Telemedicine Solution Providers - 2019

Once there was a time when every patient had to visit a clinical facility no matter what health issue they were suffering from. But, today the scenario has changed drastically, thanks to the emergence of telemedicine. Not only has telemedicine highlighted the value of using digital tools to improve the communication process remotely between the patient and the doctor, but telemedicine has also eased the way people receive medical care at the comfort of their home. In short, telemedicine has the potential for delivering faster, seamless, better, economic, and more convenient care.

One of the trends leading the telemedicine sector is the establishment of virtual clinics. Being an integral component of telemedicine, virtual medical centres play a vital role in reducing the expenses, burden, and time spent in travelling to and fro from clinics. Multiple healthcare providers working in psychiatry, neurology, dermatology, and more have already set up many virtual clinics to dispense remote services to patients.

Another interesting feature of telemedicine is improving patients’ mental health, which has taken the driver seat in today’s fast-paced era. But now many telemedicine providers are working toward adopting tele-mental health, which not only makes receiving mental health treatment in the privacy of their homes but also encourages use of smart devices to receive care.

However, while there is a plethora of telemedicine techniques, healthcare providers are often faced with the dilemma of choosing reliable and up-to-date telemedicine solution providers. To help them cross the sea of doubt, a distinguished panel comprising of CEOs, CIOs, VCs, and analysts along with the editorial panel of Healthcare Tech Outlook have listed top 10 telemedicine solution providers in the current edition. These telemedicine solution providers have been hand-picked for their customer-centric approach toward offering telemedicine solutions.

We present to you Healthcare Tech Outlook’s “Top 10 Telemedicine Solution Providers-2019.”

MediOrbis
Connect with a World Class Medical Specialist: Anywhere in the World

Telemedicine has been used for several years to bring healthcare services to patients in remote locations. However, despite the benefits of increased access to care, improved quality, and lower cost, telemedicine has not witnessed widespread adoption. MediOrbis, a multi-specialty telemedicine practice, is changing the way medical care is delivered around the world with its robust physician network that includes the entire spectrum of clinical specialists and subspecialists. “Our end-to-end telemedicine platform includes the technology and staffing to provide patients access to expert telemedicine care,” states Jonathan Wiesen, MD, founder and Chief Medical Officer of MediOrbis/MySpecialistMDNetwork. The company brings the highest level providers to the farthest reaches of the globe.

Leveraging a unique model that facilitates collaboration on an international scale with local partners, MediOrbis allows a patient to connect with physicians who identify with their culture and language. Apart from ensuring the patient’s comfort, this model grants easier access to a particular region’s healthcare infrastructure, resulting in greater flexibility in providing clinical services. Patients residing overseas can also gain access to top-tier U.S. board-certified physicians and specialists. All of the doctors in MediOrbis’s physician network, MySpecialistMDNetwork, have been trained in reputed medical institutions and, before joining, are subjected to rigorous background assessments and evaluation. Multiple continuous feedback mechanisms are in place to ensure that the highest standard of clinical performance is maintained.

MediOrbis collaborates with a diverse group of clients, ranging from hospitals and insurance companies to employee benefits providers. This is accomplished through its proprietary software that serves as a platform for connecting physicians to remote patients. The platform was built for simplicity and efficiency, both for the patient and the provider. “Our platform was developed solely with the goal of streamlining and optimizing the workflow for physicians to connect with patients,” says Wiesen. After a quick registration process, appointments at a convenient time, or requests to be connected to a physician immediately can be set up through the platform’s portal. Patients can either connect via video or audio for consultation with a general telemedicine physician or a specialist.

MediOrbis’s platform was designed by the former director of one of the largest healthcare companies in the U.S. Consequently, the platform maintains the highest level of security encryption and HIPAA compliance. MediOrbis aims to enhance its platform to provide a superior user experience, and also grow its network of healthcare service providers. “As we continue to broaden our global footprint, we gain more experience with our clinical program to provide top-tier telemedicine service,” says Wiesen.

Since it is a physician founded and led practice, MediOrbis’s primary goal is to provide patients with access to a huge breadth and the highest level of medical care. Along with outstanding patient experience, the company ensures that physicians also enjoy providing care. This is achieved through a straightforward platform that streamlines documentation processes and eliminates inefficiencies found in run-of-the-mill medical software platforms. Moreover, the platform minimizes overhead costs and helps expand patient reach in regions where other telemedicine companies have yet to venture. For patients with chronic or long-term medical conditions, remote patient monitoring is a vital service facilitated seamlessly by MediOrbis’s platform. MediOrbis is proud to offer the ability to connect a patient with a world-class medical expert at anytime, anywhere for cutting-edge diagnosis and treatment.
“Couldn’t be any easier!”
- Satisfied patient
